GRABILL PROUDLY INTRODUCES ECO-CHOICE WINDOWS
A Perfect Solution for Architects & Builders Looking for Sustainable Options

Almont, Michigan, October 22, 2009 – Eco-Choice Windows are a perfect solution for architects and builders looking for sustainable options. By simply specifying Eco-Choice Windows you are assured the product has been researched and designed to meet Leadership in Energy and Environmental Design (LEED®) criteria.

For years Grabill Windows & Doors has been committed to making high performance Architectural windows that meet and exceed Energy Star ratings for efficiency. Grabill took it one step further with their newly introduced, Eco-Choice window. Through research, development and testing Grabill has standardized a “green” window built with sustainable, low emitting and recycled materials. The Eco-Choice window materials include local, sustainable and FSC certified lumber, hardware fabricated with high post consumer content, and low VOC finishes and glues. This window is also available in aluminum clad, made with 95% post consumer content. As with Grabill products, using local suppliers when ever possible saves energy costs and puts money back into the states economy. Projects that are within 500 miles of Grabill earn additional LEED® credits as well.

Grabill Window products are built with integrity and built to last. Their high standards of traditional craftsmanship, integrity and service carry through to the Eco-Choice window. This window is a perfect choice for architects and builders seeking LEED® credits.

For additional information on the Eco-Choice window, and credits fulfilled with Grabill Products, please contact Elizabeth Grabill.

About Grabill Windows & Doors – Grabill has served the architectural community for over 25 years, offering an exceptional line of products with outstanding character and value. Grabill designs and manufactures premium quality all-wood, bronze and aluminum clad windows for residential, commercial and historic projects. Our high performance architectural windows are built to your specifications with few limitations, which allows for design flexibility.
