

GRABILL BULLETIN

Fall 2008

Grabill expands....not once....TWICE!

In June of 2007 Grabill celebrated the Grand Opening of their 8000 square foot addition. The following June, Grabill once again increased their manufacturing facility. This time, they leased a 16,000 sq. foot building 1 block from their main headquarters. The new addition, known as Grabill West, is dedicated to the bronze and aluminum clad product line.

History in the making.....or should I say remaking

Grabill continues to do historical restorations with the most recent being in downtown Denver's Steel Building, also known as the Fontius Building. Grabill was able to recreate modern, energy-efficient pivot windows that work exactly as they did in 1923. This job has since won the Silver Hard Hat Award for an outstanding restoration/renovation project as noted in the 10/08 issue of Colorado Construction.

Featuring bronze and aluminum clad

Our premier product line showcases Grabill custom extruded profiles. A classic alternative to our all wood window, clad offers long durability in any environment. Hand rubbed patina finishes, precision engineered, fully customized.

Meeting the needs of Architects for 25 years!
